The iso 22 kD antigen, antigenic fragments of antibhodies can be used in a vaccine for the prevention of infection by N. meningitidis or by N. gonorrhoeae in humans. The antibodies may also be used diagnostically to detect N. meningitidis infection. The antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Neisseria meningitidis antigen, highly conserved between different strains - useful for prodn. of antibodies for immunisation against, or diagnosis of, N. meningitidis infection

The isolated 4 strains of N. meningitidis of antibodies can be used in a vaccine for the prevention of infection by N. meningitidis of by N. gonorrhoeae in humans. The antibodies may also be used diagnostically to detect N. meningitidis infection. The antigen may also be used to detect antibodies specific to N. meningitidis

The isolated approximate the strains of antigenic fragments of antibodies can be used in a vaccine for the prevention of infection by N. meningitidis or by N. gonorrhoeae in humans. The antibodies may also be used diagnostically to detect N. meningitidis infection. The antigen may also be used to detect antibodies specific to N. meningitidis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Neisseria meningitidis antigen, highly conserved between different

The iso 22 kD antigen, antigenic fragments of antibodies can be used in a vaccine for the prevention of infection by N. meningitidis of by N. gonorrhoeae in humans. The antibodies may also be used diagnostically to detect N. meningitidis infection. The antigen may also be used to detect antibodies specific to N. meningitidis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Neisseria meningitidis antigen, highly conserved between different
strains - useful for prodn. of antibodies for immunisation against,
or diagnosis of, N. meningitidis infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 7; Fig 8; 117pp; English.

                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                   species. A claimed composition includes the NspA protein, preferably in mature form. The compositions are used e.g. as immunogenic compositions, recines or diagnostic reagents. They are used to treat or prevent Neisserial infection, to detect the presence of Neisserial bacteria or of antibodies raised against Neisserial bacteria, and/or as reagents which can raise antibodies
                                                                                                                                                                                                                                                                                                                                                                                                        combination compositions comprising: (i) 2 or more Neisserial proteins, (ii) 2 or more different Neisserial nucleic acids; or (iii) mixtures of 1 or more Neisserial protein and 1 or more Neisserial nucleic acids are Neisserial nucleic acid. The proteins and nucleic acids are preferably from different Neisseria spp., especially Neisseria meningitidis and Neisseria gonorrhoeae, but may be from the same
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                developed as a vaccine for the prevention of meningococcal disease caused by all serotypes. The invention provides

AAR73911 is the Neisseria meningitidis opacity related protein POPM3. It contains the meningitis related antigenic sequences (MRHAS) claimed in AAR73889 and AAR73901, which are recognised by a monoclona antibody from the hybridoma Rubella virus (RV)-1. The claimed MRHAS peptides may be used in immunoassays to diagnose the presence of bacterial and/or viral meningitis agents in a sample, or in prophylactic and therapeutic meningitis treatments. The peptides may also be used as vaccines against meningitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New peptide(s) and corresp. antibodies for the treatment of meningitis - the peptide(s) corresp. to homologous antigenic sites on bacterial and viral agents and on chemokine(s), used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 47; Fig 5/10; 98pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 9 describes the epitope mapping of the 22 kD N. meningitidis protein. Identification was accomplished using 18 overlapping synthetic peptides (AAW04895 to AAW04912).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Neisseria meningitidis antigen, highly conserved between different
strains - useful for prodn. of antibodies for immunisation against
or diagnosis of, N. meningitidis infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 24; Page 84; 117pp; English.

                                                                                                                                                                                                                                                                                                                                                Дb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to antisense inhibitors of genes essential to C prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential C genes, their use in the discovery of novel antibiotics, the essential C genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella C pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The C invention is also useful for the identification of potential new targets of antibiotic development. The antisense nucleic acids can also be used C to identify proteins used in proliferation, to express these proteins, C and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen CC programmes. The antisense nucleic acid sequence is also useful to screen CC a wide variety of organisms. The present sequence represents an CC wide variety of organisms. The present sequence represents an CC Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic

Each of these peptides contain an LBI(f) peptide which is a 19 amino acid peptide derived from the sequence of MOMP P5 from strain ntHi1128, representing amino acids Arg117 to Gly135. This peptide represents the third exposed loop of P5 and is a potential B cell epitope. The loops of the invention are modified in terms of being in a non-native

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify mortalis used to make the process of the contract of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 3; Seq ID No 13845; 511pp; English

                                                                                                                                                                                                                                The present sequence represents an outer membrane protein 21 (OMP21) of Moraxella catarrhalis strain ATCC49143. The OMP21 protein has an apparent molecular weight of 16-20 kD as determined by sodium dodecylsulfate polyacrylamide gel electrophoresis (SDS-PAGE). OMP21, its nucleic acids and antibodies can be used in prophylactic and therapeutic compositions for treating a M. catarrhalis bacterial infection, otitis media, respiratory infections, sinusitis and pneumonia. They are useful as reagents for the clinical or medical diagnosis of M. catarrhalis infections and for scientific research on the properties of pathogenicity, virulence and infectivity of M. catarrhalis and host defence mechanisms. The antibodies, particularly those that are cytotoxic may be used in passive immunisation to prevent or attenuate M. catarrhalis infections of animals e.g. humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Outer membrane protein 21; OMP21; strain ATCC49143; bacterial infection; otitis media; respiratory infection; sinusitis; pneumonia; immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The outer membrane protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAY84612 standard; Protein; 180 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated outer membrane protein from a Moraxella catarrhalis strain used for diagnosis treatment and prevention of disease caused by M. catarrhalis e.g. pneumonia, otitis media and respiratory infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Moraxella catarrhalis

                                 Porphorymonas gingivalis (PG) polypeptide sequences given in AAY34318 to AAY3483. AAY91802 to AAX91989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease
                                                                                                                                                                                                                                               Agius CT,

                                            AAX91536 to AAX91801 encode two hundred and sixty six antigenic Porphorymonas gingivalis (PG) polypeptide sequences given in AAX94318 to AAX94583. AAX91802 to AAX91989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local Similarity
                                                                                                                                                                                                                                                                          This represents a UspA2 antigen of Moraxella catarrhalis strain 035E. Nucleic acid sequences encoding the UspA1 and A2 antigens of M. catarrhalis isolates 035E, 046E, TTA24 and TTA37 can be used in genetic vaccination. An antigenic composition or vaccine containing antigenic peptides from UspA1 or UspA2 antigens are used to induce an immune response in mammals against M. catarrhalis and can be used to the provided of the containing and the containing and the containing and the containing the cont
   sequences are also used to produce recombinant proteins and for screening for potential anti-M. catarrhalis agents, while their fragments are
                                                       are useful for passive immunisation and as immunoassay reagents. Detection of the epitopic core sequence, by immunoassay or by PCR, is used to diagnose infection. The Usp antigens encoding nucleic acid
                                                                                                                                                  treat infections such as otitis media, sinusitis, lower respiratory tract infections. They can also be used as immunity enhancers for other bacterial, parasitic or viral antigens, to raise antibodies and as immunoassay reagents for detecting specific antibodies. The antibodies

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Soxo
This represents a UspA2 antigen of Moraxella catarrhalis strain TTA24.

Nucleic acid sequences encoding the UspA1 and A2 antigens of
M. catarrhalis isolates O35E, 046E, TTA24 and TTA37 can be used in
C m. catarrhalis isolates O35E, 046E, TTA24 and TTA37 can be used in
C enetic vaccination. An antigenic composition or vaccine containing
C antigenic peptides from UspA1 or UspA2 antigens are used to induce an
C immune response in mammals against M. catarrhalis and can be used to
C treat infections such as otitis media, sinusitis, lower respiratory
C tract infections. They can also be used as immunity enhancers for other
C bacterial, parasitic or viral antigens, to raise antibodies and as
C immunoassay reagents for detecting specific antibodies. The antibodies
C are useful for passive immunisation and as immunoassay reagents.
C Detection of the epitopic core sequence, by immunoassay or by PCR, is
C used to diagnose infection. The Usp antigens encoding nucleic acid
C sequences are also used to produce recombinant proteins and for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                       New peptide(s) containing the core epitope of Moraxella catarrhalis Usp proteins - useful in, e.g. vaccines to prevent or treat M. catarrhalis infection, and antibodies for passive immunisation

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A,Title: The opacity proteins of Neisseria gonorrhoeae strain MS11 are encoded by a f A,Reference number: S16610; MUID:92114767
A,Accession: S16612
A,Rocession: S16612
A,Rosidues: 1-258 <BHA>
A,Residues: 1-258 <BHA>
A,Coss references: EMBL:X52369
A,Cross references: EMBL:X52369
A,Experimental source: strain MS11, variant 4.8
A,Note: the authors did not translate the sequence for the signal peptide
A,Note: expression of opacity proteins is regulated by the number of translated repea of repeats place the start codon in frame with the rest of the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В

A;Note: the authors translated the codon CCA for residue 32 as Thr
A;Note: the authors did not translate the sequence for the signal peptide
A;Note: expression of opacity proteins is regulated by the number of translated
of repeats place the start codon in frame with the rest of the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MO1.
